

Everything You Need to Know E-CIGARETTES

WHAT IS AN E-CIGARETTE?

E-cigarettes and vape devices are handheld devices designed to deliver emissions for inhalation by heating a solution that commonly contains nicotine, a humectant, and flavoring chemicals.

WHAT'S IN AN E-CIGARETTE?

E-cigarette companies advertise e-cigarettes as only containing nicotine, flavoring chemicals, and humectants (propylene glycol and/or vegetable glycerin) although toxicants, ultrafine particles, and carcinogens have also been found and are known to cause negative health effects.

Smoking Statistics of U.S High School Students

HEALTH RISKS IN E-CIGARETTE USERS VS NON-USERS

Higher incidence of COPD in e-cigarette users

Higher incidence of respiratory disease in e-cigarette users

Higher incidence of asthma in e-cigarette users

Higher incidence of chronic bronchitis in e-cigarette users

Higher incidence of emphysema in e-cigarette users

Higher odds of myocardial infarction in e-cigarette users
